

NMC-TE100PF

NIKOMAX cable tester, UTP/STP, RJ11, RJ12, RJ45, with PortFlash function and LED light

The NIKOMAX NMC-TE100PF cable tester is designed to work with twisted pair cables, terminated RJ45 connectors and telephone cables with RJ11 connectors. The tester is able to diagnose such line errors as violation of the wiring layout of conductors, wire breaks and short circuits. Cable LAN testers are designed for field testing of the cable network for proper wiring and cable line integrity. The tester is equipped with the “Port Flash” function, which allows you to determine the port of active equipment to which the cable is connected, by simultaneously indicating LED-LEDs on the tester and the port of active equipment, and the LED flashlight on the main unit of the tester allows you to work in poorly lit rooms.

Ordering Table

P/N	Description	Individual package	Volume, m3	Weight, kg
		Dimensions, mm		
NMC-TE100PF	UTP / STP LAN tester with FlashPort function	115 x 175 x 37	0.00074	0.18

Detailed characteristics

Characteristic	Value
Warranty	1 year
Protection level	Black
Housing material	Plastic
Packaging	Cardboard box
Temperature range	Storage from - 20 C to + 40 C, operation from - 10 C to + 40 C
LED Color	White LED
Connectors on the device	RJ45, RJ11 / RJ12
Line testing for breaks and short-circuits	Yes
Checking for correct wiring	Yes
Shielding integrity check	Yes
Battery	9V Krone battery (not included)
Type of cable	LAN UTP / STP, Tel.
Maximum length of tested lines	300 m
Identification of the active equipment port	Yes, "Port Flash"
Test mode	Normal / Slow
